Conditional Approval Letter: Serverless compute

Document control	
Document ID	CAL-TRB-2026-034
Document type	Conditional Approval Letter
Date	2026-06-16
Status	Active
Meeting	TRBM-2026-06-16
Review IDs	TRB-2026-034
Feature keys	Serverless compute@Compute
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

To: Finance · From: Tech Review Board · Re: TRB-2026-034 · Date: 2026-06-16

The TRB approved **Serverless compute** with conditions at TRBM-2026-06-16. The approval does **not** permit PHI use
until every condition below is verified closed and the TRB moves the review to Approved.

ID	Condition	Requirement	Verification	Due
COND-034-1	Compliance Security Profile (CSP) GA on Serverless	Databricks must release CSP support for serverless compute. PHI workloads are blocked until CSP is GA and validated on serverless.	Databricks product release notes and feature availability documentation	2026-12-31
COND-034-2	Cost Attribution to	Implement cost allocation for	Cost analysis report showing	2026-08-16

ID	Condition	Requirement	Verification	Due
	Claims Operations	serverless jobs so Claims Operations can track DBU spend. Tagging must enable per-job and per-team cost reporting.	serverless job costs tagged by team and workload	
COND-034-3	Performance Baseline for Claims Jobs	Run 5 pilot claims jobs on serverless (100-500GB datasets) and document P50/P99 latency vs. classic compute. Startup overhead must be <5 min.	Performance benchmark report with job latency distributions and startup times	2026-07-16

Rationale: Serverless Compute is approved with conditions. PHI workloads require the compliance security profile enabled before production use. Condition COND-034-1 requires CSP GA on serverless; COND-034-2 requires cost attribution implementation; COND-034-3 requires performance baseline. Follow-up at 2026-08-16.
