Decision Record: Approve Row Filters & Column Masks

Document control	
Document ID	DR-2026-001
Document type	Decision Record
Date	2026-07-14
Status	Accepted
Review IDs	TRB-2026-001
Feature keys	Row filters & column masks@Platform & Governance
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Feature: Row Filters & Column Masks (Unity Catalog)
Status: Accepted (Approved)
Date: July 14, 2026

Decision

APPROVED for PHI use. No conditions. Feature is GA; meets all HIPAA Technical Safeguard requirements (access control, audit logging, encryption).

Rationale

Row-level and column-level filtering is a core UC capability, GA and mature. Immutable at catalog layer; audit trail complete. This is a foundational control for member data protection.

Consequences

- **Benefit:** Enforces access controls; enables safe column masking (e.g., SSN last-4 only)

- **Risk:** Low. Inherited controls from Databricks/AWS infrastructure.

Approved By: [CISO] — Date: July 14, 2026

Classification: Internal – Synthetic Sample
