Decision Record DR-2026-013: Auto Loader

Document control	
Document ID	DR-2026-013
Document type	Decision Record
Date	2026-06-02
Status	Accepted
Meeting	TRBM-2026-06-02
Review IDs	TRB-2026-013
Feature keys	Auto Loader@Ingestion
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Status: Approved · **Approved scope:** PHI · **Decided at:** TRBM-2026-06-02
Review: TRB-2026-013 · **Feature:** `Auto Loader@Ingestion` · **Databricks phase at decision:** GA

Context

Claims Operations selected Auto Loader for continuous 837 EDI claim ingest and daily eligibility feeds. TRB evaluated file discovery mechanisms and guaranteed delivery semantics.

Decision

Auto Loader is approved as the standard incremental ingestion path for claims and eligibility. File notification mode is required for high-volume EDI drops; directory listing is acceptable for lower-volume feeds.

Risks considered

- File notification latency for high-volume drops
- Directory listing scalability at 10M+ files
- Duplicate handling edge cases

Mitigations relied on

- File notification mode used for high-volume feeds
- Schema inference handles field additions automatically
- Duplicate detection via file path and checksum

Control mappings

- HIPAA-Security-Rule 164.308(a)(1)(ii)(B) (Information access management): Satisfied
- NIST-800-53-R5 CM-6 (Configuration Settings): Satisfied
- HITRUST-CSF 09.b (Secure Development and Management): Satisfied

Re-review

Trigger: Partner feed change or volume 10x increase · Next review: 2027-06-02
