Decision Record DR-2026-014: Lakeflow Declarative Pipelines (DLT)

Document control	
Document ID	DR-2026-014
Document type	Decision Record
Date	2026-06-02
Status	Accepted
Meeting	TRBM-2026-06-02
Review IDs	TRB-2026-014
Feature keys	Lakeflow Declarative Pipelines (DLT)@Pipelines & Data Engineering
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Status: Approved · **Approved scope:** PHI · **Decided at:** TRBM-2026-06-02
Review: TRB-2026-014 · **Feature:** `Lakeflow Declarative Pipelines (DLT)@Pipelines & Data Engineering` · **Databricks phase at decision:** GA

Context

Claims Operations proposed DLT as the standard for building medallion (bronze/silver/gold) pipelines. TRB reviewed data-quality expectations, SCD handling, and audit capabilities.

Decision

DLT is approved as the enterprise standard for building and curating trusted claims and member tables. Expectation failures must be monitored; quarantine tables are part of the standard architecture.

Risks considered

- Expectation failures hide data-quality issues if quarantine not monitored
- SCD Type 2 complexity for member history
- Pipeline dependencies not visible in lineage

Mitigations relied on

- Expectations route bad rows to quarantine tables with alerts
- APPLY CHANGES handles SCD Type 2 natively
- DLT lineage integrates with UC governance hub

Control mappings

- HIPAA-Security-Rule 164.312(a)(2)(ii) (Encryption and decryption): Satisfied
- NIST-800-53-R5 SC-28 (Protection of Information at Rest): Satisfied
- HITRUST-CSF 09.c (Change Management): Satisfied

Re-review

Trigger: Major DLT architecture change · Next review: 2027-06-02
