Decision Record DR-2026-025: Secure Cluster Connectivity (NPIP)

Document control	
Document ID	DR-2026-025
Document type	Decision Record
Date	2026-04-21
Status	Accepted
Meeting	TRBM-2026-04-21
Review IDs	TRB-2026-025
Feature keys	Secure Cluster Connectivity (NPIP)@Security & Networking
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Status: Approved · **Approved scope:** PHI · **Decided at:** TRBM-2026-04-21
Review: TRB-2026-025 · **Feature:** `Secure Cluster Connectivity (NPIP)@Security & Networking` · **Databricks phase at decision:** GA

Context

Information Security presented Secure Cluster Connectivity (no-public-IP / NPIP) as a baseline network control for production PHI workloads. TRB reviewed routing and internet access constraints.

Decision

Secure Cluster Connectivity is approved and required for all production PHI workloads. All production clusters must have public IPs disabled.

Risks considered

- Public IPs still assigned if not configured correctly

- Internet egress via NAT leaks IP source
- Egress filtering not enforced

Mitigations relied on

- Cluster policies enforce no-public-IP setting
- NAT gateway restricted to approved destinations
- Egress firewall rules in network policies

Control mappings

- HIPAA-Security-Rule 164.308(a)(4)(ii)(b) (System activity review): Satisfied
- NIST-800-53-R5 SC-7 (Boundary Protection): Satisfied
- HITRUST-CSF 10.a (Audit and Accountability): Satisfied

Re-review
