Decision Record DR-2026-026: PrivateLink (front-end & back-end)

Document control	
Document ID	DR-2026-026
Document type	Decision Record
Date	2026-04-21
Status	Accepted
Meeting	TRBM-2026-04-21
Review IDs	TRB-2026-026
Feature keys	PrivateLink (front-end & back-end)@Security & Networking
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Status: Approved · **Approved scope:** PHI · **Decided at:** TRBM-2026-04-21
Review: TRB-2026-026 · **Feature:** `PrivateLink (front-end & back-end)@Security & Networking` · **Databricks phase at decision:** GA

Context

Information Security proposed PrivateLink (AWS PrivateLink) for front-end and back-end connectivity, keeping all Databricks traffic off the public internet. TRB reviewed endpoint configuration and traffic isolation.

Decision

PrivateLink is approved as a core requirement for the payer's PHI environment. Dual PrivateLink (front and back) is required for production PHI. Single PrivateLink is acceptable for non-PHI analytics.

Risks considered

- Front-end PrivateLink alone allows data egress via internet
- Back-end PrivateLink adds cost and complexity
- NAT gateway still needed for non-Databricks egress

Mitigations relied on

- Dual PrivateLink (front + back) required for PHI workloads
- Network policies restrict back-end routing
- NAT gateway egress filtered to approved destinations

Control mappings

- HIPAA-Security-Rule 164.312(a)(1) (Access controls): Satisfied
- NIST-800-53-R5 SC-7 (Boundary Protection): Satisfied
- HITRUST-CSF 10.b (Audit and Accountability): Satisfied
