Decision Record DR-2026-030: Enhanced Security Monitoring

Document control	
Document ID	DR-2026-030
Document type	Decision Record
Date	2026-05-19
Status	Accepted
Meeting	TRBM-2026-05-19
Review IDs	TRB-2026-030
Feature keys	Enhanced Security Monitoring@Security & Networking
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Status: Approved · **Approved scope:** PHI · **Decided at:** TRBM-2026-05-19
Review: TRB-2026-030 · **Feature:** `Enhanced Security Monitoring@Security & Networking` · **Databricks phase at decision:** GA

Context

Information Security selected Enhanced Security Monitoring (ESM) to add malware, file-integrity, and vulnerability monitoring on compute handling PHI. TRB reviewed agent overhead and alert handling.

Decision

Enhanced Security Monitoring is approved for production PHI workloads on classic compute. ESM is required for all production clusters running PHI. ESM coverage for serverless compute is to be confirmed with the account team.

Risks considered

- Monitoring agent impacts cluster performance
- False positives overwhelm security team
- Classic-compute-only limitation

Mitigations relied on

- Agent overhead <5% CPU; tuned sampling rates
- Alert thresholds and allowlists reduce false positives
- Serverless compute ESM roadmap exists but not yet approved

Control mappings

- HIPAA-Security-Rule 164.308(a)(5)(ii)(A) (Log-in monitoring): Satisfied
- NIST-800-53-R5 SI-4 (System Monitoring): Satisfied
- HITRUST-CSF 10.c (Log Reviews, Monitoring and Alerting): Satisfied

Re-review
