Decision Record DR-2026-035: Classic compute

Document control	
Document ID	DR-2026-035
Document type	Decision Record
Date	2026-06-30
Status	Accepted
Meeting	TRBM-2026-06-30
Review IDs	TRB-2026-035
Feature keys	Classic compute@Compute
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Status: Approved · **Approved scope:** PHI · **Decided at:** TRBM-2026-06-30
Review: TRB-2026-035 · **Feature:** `Classic compute@Compute` · **Databricks phase at decision:** GA

Context

Enterprise Data Platform maintains Classic Compute as a strategic compute option for workloads requiring specific instance types or network controls not available via serverless.

Decision

Classic Compute is approved for production workloads where serverless is not suitable. Cluster policies are required; all production clusters must use an approved Databricks Runtime LTS version, with Photon where supported.

Risks considered

- Idle cluster cost drift
- Cluster configuration drift vs. policy
- Dependency on legacy cluster manager

Mitigations relied on

- Cluster auto-termination policies enforced
- Cluster policies lock critical settings
- Gradual migration to serverless as gaps close

Control mappings

- HIPAA-Security-Rule 164.308(a)(4)(ii)(c) (Protection systems): Satisfied
- NIST-800-53-R5 CM-6 (Configuration Settings): Satisfied
- HITRUST-CSF 09.d (Information Security Event Management): Satisfied

Re-review
