Feature keys	Lakeflow Jobs (Workflows)@Pipelines & Data Engineering
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-015 · **Feature:** `Lakeflow Jobs (Workflows)@Pipelines & Data Engineering` · **Databricks phase at submission:** GA
Requesting business unit: Claims Operations · **Submitted:** 2026-05-16 · **Scheduled for:** TRBM-2026-06-02
Primary reviewer: Enterprise Architect

Business need

Claims Operations and Finance jointly submitted Workflows (Lakeflow Jobs) as the enterprise orchestration engine. TRB evaluated task types, error handling, and audit logging.

Intended use cases

- Daily claims processing orchestration
- Multi-step reconciliation workflows
- Reporting job scheduling

Risks identified by the requester

- Job dependencies not captured if manual coordination still used
- Timeout handling for long-running claims joins
- Audit trail for task-level retries

Proposed mitigations

- Job DAG enforces explicit task dependencies
- Timeout limits configured per task type
- Each task execution logged to audit tables

Reference

- Databricks documentation: https://docs.databricks.com/aws/en/jobs/
- Known limitations (tracker): none recorded
