Meeting	TRBM-2026-06-16
Review IDs	TRB-2026-018
Feature keys	Databricks SQL@SQL & BI Analytics
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-018 · **Feature:** `Databricks SQL@SQL & BI Analytics` ·
Databricks phase at submission: GA
Requesting business unit: Analytics Operations · **Submitted:** 2026-05-29 ·
Scheduled for: TRBM-2026-06-16
Primary reviewer: Data Governance Lead

Business need

Analytics Operations selected Databricks SQL (serverless warehouse) as the serving layer for analysts and BI tools querying PHI. TRB reviewed row/column filter enforcement and audit logging.

Intended use cases

- BI tool connections (Tableau, Looker)
- Ad-hoc analyst queries
- Scheduled reporting SQL

Risks identified by the requester

- Filters bypassed if analysts query storage directly
- Warehouse concurrency limits at scale
- Audit log volume for high-query-rate environments

Proposed mitigations

- External table access restricted; SQL warehouse required
- Warehouse queues configured per team SLA
- Audit sampling for cost control; 100% for PHI modifications
