Document type	Review Intake Request
Date	2026-09-21
Status	Submitted
Meeting	TRBM-2026-10-06
Review IDs	TRB-2026-022
Feature keys	Model Serving@AI / ML
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-022 · **Feature:** `Model Serving@AI / ML` · **Databricks phase at submission:** GA
Requesting business unit: Research & Innovation · **Submitted:** 2026-09-21 · **Scheduled for:** TRBM-2026-10-06
Primary reviewer: CISO

Business need

Research & Innovation submitted Model Serving for deploying trained models as low-latency APIs (e.g., real-time risk scoring on claims). TRB is reviewing network isolation and audit logging before scoring PHI.

Intended use cases

- Real-time risk scoring on incoming claims
- Fraud detection APIs
- Member eligibility real-time check

Risks identified by the requester

- API endpoint exposed to internet without auth
- Model input/output not logged for audit
- Inference latency violates claims SLA

Proposed mitigations

- Model endpoints run in private network with VPC endpoint
- Request/response logging to audit tables with sampling
- P99 latency target: <100ms for risk scoring
