Date	2026-09-22
Status	Submitted
Meeting	TRBM-2026-10-06
Review IDs	TRB-2026-023
Feature keys	AI Functions (SQL)@Generative AI & Agents
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-023 · **Feature:** `AI Functions (SQL)@Generative AI & Agents` ·
Databricks phase at submission: GA
Requesting business unit: Analytics Operations · **Submitted:** 2026-09-22 ·
Scheduled for: TRBM-2026-10-06
Primary reviewer: Chief Privacy Officer

Business need

Analytics Operations submitted AI Functions (SQL) for calling foundation models directly from SQL to classify, extract, and summarize at scale. TRB is reviewing which foundation models are approved for PHI-bearing prompts.

Intended use cases

- Appeal letter classification and summarization
- Diagnosis code extraction from clinical notes
- Member sentiment from feedback surveys

Risks identified by the requester

- LLM training data includes customer prompts and outputs
- Uncontrolled model drift affects classification accuracy
- Prompt injection reveals PII in classification result

Proposed mitigations

- Foundation models vetted for no-training-data-retention guarantees
- Model versioning controlled via Databricks Foundation Model API
- Input sanitization and prompt injection validation
