Review Intake Request: Secure Cluster Connectivity (NPIP)

Document control	
Document ID	INT-TRB-2026-025
Document type	Review Intake Request
Date	2026-04-02
Status	Submitted
Meeting	TRBM-2026-04-21
Review IDs	TRB-2026-025
Feature keys	Secure Cluster Connectivity (NPIP)@Security & Networking
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-025 · **Feature:** `Secure Cluster Connectivity (NPIP)@Security & Networking` · **Databricks phase at submission:** GA
Requesting business unit: Information Security · **Submitted:** 2026-04-02 · **Scheduled for:** TRBM-2026-04-21
Primary reviewer: CISO

Business need

Information Security presented Secure Cluster Connectivity (no-public-IP / NPIP) as a baseline network control for production PHI workloads. TRB reviewed routing and internet access constraints.

Intended use cases

- No-public-IP compute for PHI workloads
- Network segmentation baseline
- Reduced internet egress exposure

Risks identified by the requester

- Public IPs still assigned if not configured correctly
- Internet egress via NAT leaks IP source
- Egress filtering not enforced

Proposed mitigations

- Cluster policies enforce no-public-IP setting
- NAT gateway restricted to approved destinations
- Egress firewall rules in network policies
