Document type	Review Intake Request
Date	2026-04-03
Status	Submitted
Meeting	TRBM-2026-04-21
Review IDs	TRB-2026-026
Feature keys	PrivateLink (front-end & back-end)@Security & Networking
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-026 · **Feature:** `PrivateLink (front-end & back-end)@Security & Networking` · **Databricks phase at submission:** GA
Requesting business unit: Information Security · **Submitted:** 2026-04-03 · **Scheduled for:** TRBM-2026-04-21
Primary reviewer: CISO

Business need

Information Security proposed PrivateLink (AWS PrivateLink) for front-end and back-end connectivity, keeping all Databricks traffic off the public internet. TRB reviewed endpoint configuration and traffic isolation.

Intended use cases

- Private control-plane connectivity to Databricks
- Private data-plane traffic routing
- Off-public-internet data residency

Risks identified by the requester

- Front-end PrivateLink alone allows data egress via internet
- Back-end PrivateLink adds cost and complexity
- NAT gateway still needed for non-Databricks egress

Proposed mitigations

- Dual PrivateLink (front + back) required for PHI workloads
- Network policies restrict back-end routing
- NAT gateway egress filtered to approved destinations

Reference

- Databricks documentation: https://docs.databricks.com/aws/en/security/network/
- Known limitations (tracker): Dual PrivateLink needed for full private path.
