Feature keys	Customer-managed keys (CMK)@Security & Networking
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-027 · **Feature:** `Customer-managed keys (CMK)@Security & Networking` · **Databricks phase at submission:** GA
Requesting business unit: Information Security · **Submitted:** 2026-04-04 · **Scheduled for:** TRBM-2026-04-21
Primary reviewer: CISO

Business need

Information Security selected Customer-Managed Keys (CMK) for encrypting PHI at rest. TRB reviewed key lifecycle, HSM support, and key rotation automation.

Intended use cases

- Key ownership for regulated data
- Encryption at rest with payer-controlled keys
- Key rotation and revocation

Risks identified by the requester

- Key loss disables all encrypted data
- Rotation complexity for multi-region deployments
- KMS authorization bypass

Proposed mitigations

- Keys backed up in AWS KMS secure vault
- Automated rotation via KMS key policy
- KMS access controlled via IAM + UC external locations
