Feature keys	SSO / SCIM@Security & Networking
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-031 · **Feature:** `SSO / SCIM@Security & Networking` · **Databricks phase at submission:** GA
Requesting business unit: Information Security · **Submitted:** 2026-04-17 · **Scheduled for:** TRBM-2026-05-05
Primary reviewer: CISO

Business need

Information Security proposed SSO and SCIM (via Okta) for centralized identity management and automatic deprovisioning. TRB reviewed IdP failover and access revocation timing.

Intended use cases

- Centralized identity via IdP
- Automatic user provisioning and deprovisioning
- Single sign-on across Databricks

Risks identified by the requester

- SSO outage blocks Databricks access
- SCIM sync lag delays deprovisioning
- Local accounts bypass SSO controls

Proposed mitigations

- IdP redundancy via multiple Okta instances
- SCIM sync runs every 15 minutes; max 15-min lag
- Cluster policies forbid local user creation
