Document type	Review Intake Request
Date	2026-06-10
Status	Submitted
Meeting	TRBM-2026-06-30
Review IDs	TRB-2026-035
Feature keys	Classic compute@Compute
Classification	Internal – Synthetic Sample

> Acme Health Plan is fictional. This is a synthetic sample document for the Databricks Feature Tracker.

Review ID: TRB-2026-035 · **Feature:** `Classic compute@Compute` · **Databricks phase at submission:** GA
Requesting business unit: Enterprise Data Platform · **Submitted:** 2026-06-10 · **Scheduled for:** TRBM-2026-06-30
Primary reviewer: Platform Engineering Lead

Business need

Enterprise Data Platform maintains Classic Compute as a strategic compute option for workloads requiring specific instance types or network controls not available via serverless.

Intended use cases

- Customer-managed clusters for specific workloads
- Dedicated cluster pools for teams
- GPU compute for ML training

Risks identified by the requester

- Idle cluster cost drift
- Cluster configuration drift vs. policy
- Dependency on legacy cluster manager

Proposed mitigations

- Cluster auto-termination policies enforced
- Cluster policies lock critical settings
- Gradual migration to serverless as gaps close
